SUMMARY

AIML student with a strong foundation in Python, Java, SQL, and Data Structures & Algorithms. Passionate about Artificial Intelligence, Machine Learning, cloud technologies, and developing innovative solutions to real-world problems.

EDUCATION

B.E. in Artificial Intelligence and Machine Learning

New Horizon College of Engineering, Bengaluru

Pre-University (Class 12)

St. Francis Composite PU College, Bengaluru

2023 – Present

CGPA: 9.09

2021 – 2023

Percentage: 88.6%

PROJECTS

1. StudySync – AI-Based Academic Productivity Tool:

- Built ML models to predict task completion time with ~85% accuracy, improving study plan reliability.
- Designed a personalized scheduling system that adapts to user behavior, increasing schedule adherence by 30%. Improved productivity insights by analyzing historical task completion patterns.
- Tech Stack: Python, Machine Learning, Feature Engineering

2. Risk-Based Proctoring System (Privacy-First AI):

- Developed an AI-powered proctoring system that eliminates webcam surveillance, improving user privacy and compliance. Implemented Isolation Forest and SVM models to detect anomalous behavior with 90%+ precision.
- Generated real-time exam risk scores, enabling scalable and fair online assessment monitoring. Reduced false positives by 25% through behavioral feature optimization.
- Tech Stack: Python, ML Models, Behavioral Analytics

3. Secure College Event Registration System

- Developed a full-stack college event registration system for managing events and student registrations securely. Implemented JWT-based authentication and role-based access control for secure user login and event management.
- Built RESTful APIs for event creation, registration, and deletion using Node.js, Express.js, and MongoDB. Containerized the application with Docker to enable consistent deployment across different environments.
- Tech Stack: Node.js, Express.js, MongoDB, JWT, Docker, HTML, CSS, JavaScript

RESEARCH PAPER

1. AI-Powered Counter-Honeypots: Proposed an AI-driven deception framework to detect and mislead AI-based cyberattacks.

2. AI-Powered Autonomous Dustbin: Designed a smart hygiene system enabling automatic waste segregation using intelligent sensing.

SKILLS

- **Languages:** Python, JavaScript, C, Java, R-programming
- **Backend & Development:** HTML, CSS, REST APIs
- **Databases:** MySQL, MongoDB
- **Core Concepts:** API Design, CRUD Operations, Data Structures, DBMS
- **Tools & Platforms:** Git, GitHub, Google Sheets
- **Additional:** Machine Learning, Problem Solving, AWS

ADDITIONAL INFORMATION:

- **Language: English** (Advance), Hindi (conversational), Kannada (Native)
- **Certifications:** GIT (IIT Bombay), Docker (IIT Bombay), ML (NPTEL), Python (Scaler)
- **Leadership & Activities:** Chair, IEEE SMC Society; Event Management; Team Leadership; Community Engagement
