

AKASH GADDI

Bangalore, India | +91 8310791877 | akashgaddi67@gmail.com | [LinkedIn](#) | [GitHub](#)

Artificial Intelligence and Machine Learning undergraduate with practical experience in building intelligent systems using Python, deep learning, and LLM-based technologies. Skilled in developing RAG pipelines and agentic AI applications for real-world problem solving. Interested in building scalable and impactful AI-driven solutions.

EDUCATION

NEW HORIZON COLLEGE OF ENGINEERING, Bangalore

Bachelor of Engineering (Artificial Intelligence and Machine Learning) | 2023 – 2027

EXPERT PU COLLEGE, Mangalore

Pre-University Course (PCMB) | 2021 – 2023

SRI CHAITANYA TECHNO SCHOOL, Gangavathi

Indian Certificate of Secondary Education (ICSE) | 2021

SKILLS

Programming Languages: Python, Java, C, JavaScript

Machine Learning: Deep Learning (CNN), Natural Language Processing (NLP), LLM Applications, Retrieval-Augmented Generation (RAG), Agentic AI

Libraries/Frameworks: TensorFlow, Keras, Scikit-learn, Pandas, NumPy, LangChain

Web Technologies: HTML, CSS, Node.js

Tools: Git, GitHub

Data & BI Tools: ,SQL (MySQL),Power BI

Languages: English, Kannada, Telugu, Hindi

PROJECTS

Emotion-Based Music Recommender

- Developed a real-time emotion detection system that recommends music based on facial expressions.
- Used MediaPipe for facial landmark detection and a CNN model for emotion classification.
- Built a Flask-based web application for real-time music recommendations.

Technologies: Python, TensorFlow, MediaPipe, Flask

Smart Subsidy Allocation System

- Developed a machine learning-based system to assist in allocating agricultural subsidies based on input parameters such as crop type, land size, and environmental factors.
- Performed data preprocessing and feature analysis to improve prediction accuracy.
- Implemented the system using Python for processing input data and generating subsidy allocation recommendations.

Technologies: Python, Machine Learning, Pandas, Scikit-learn

Legal Intelligence Assistant (RAG-based AI System)

- Built a full-stack AI application to analyze legal documents using natural language queries.
- Implemented a simple RAG pipeline to retrieve relevant document sections for accurate, context-based responses.
- Reduced hallucination using prompt constraints and context validation techniques.

Technologies: Python, Flask, OpenRouter API, pdfplumber, HTML, JavaScript

CERTIFICATIONS AND WORKSHOPS

- Python Certification – Scaler
- Introduction to Modern AI – Cisco
- NPTEL Certification
- Agentic AI workshop(Quantum-X)
